PROFESSIONAL SUMMARY

Engineering student driven by practical problem-solving, continuous process improvement, and rapid learning agility. Experienced in applying engineering fundamentals to solve shop-floor bottlenecks, optimize workflows, and deploy cost-effective automated solutions that deliver measurable productivity gains. Demonstrated track record of collaborating across multidisciplinary teams, with exceptional adaptability to quickly master new processes, tools, and technical domains.

EDUCATION

Madras Institute of Technology (MIT), Anna University

Bachelor of Engineering in Production Engineering

Higher Secondary Certificate (HSC)

2023 – 2027

CGPA: 7.75 / 10

Score: 545 / 600 (90.8%)

TECHNICAL SKILLS

• **Areas of Interest:** Design for Manufacturing & Assembly (DFMA), Lean Manufacturing, Process Optimization

Core Engineering Skills:

- SolidWorks, Creo Parametric, Abaqus
- CATIA (Beginner), 3D Printing
- Metal Joining, Machining Processes

Software & Systems Skills:

- Python, Web Development, App Development
- Infrastructure Management, Linux/Shell
- Team Coordination, Technical Communication

WORK EXPERIENCE

SRI Energy Private Limited

Operations & Systems Intern

June 2026

Viralimalai, Trichy

- Observed and mapped valve assembly line operations, evaluating station cycle times and material staging buffers.
- Applied Lean principles and Root Cause Analysis (Fishbone diagrams, 5 Whys) to eliminate line bottlenecks and idle transit delays.
- Gained direct shop-floor exposure to industrial metal joining processes, precision machining operations, and quality inspection workflows.

PROJECTS

Core Engineering & Manufacturing Projects

Industrial Automation: Phosphating Process Cycle Time Optimization

codism.in/projects/sriautoamtion

Sri Energy Pvt. Ltd. (Live Plant Implementation)

- Tackled a live plant problem statement to eliminate operator idle waiting time during chemical phosphating treatments.
- Automated the facility's existing overhead crane dipping sequence with wireless controls under an INR 10,000 budget constraint.

Go-Kart Structural Chassis & Drivetrain Integration

codism.in/projects/mitonaaur

MITONAUR Motorsports

- Assisted the core design and assembly team in fabricating the structural tubular frame and aligning drivetrain components.
- Evaluated structural clearances, fastener selection, and welding layout to ensure structural durability and driver safety on track.

Systems, Virtualization & Software Solutions

Middleman: Vendor RFQ Workflow Automation (Prototype Demo)

codism.in/projects/middleman

Industry Problem Statement (GT Solve)

- Tackled an industry problem statement from GT Solve aimed at digitizing and accelerating multi-supplier quotation cycles.
- Engineered a functional demo platform to log vendor specs and compare quotes, validating lead-time reductions over manual tracking.

Virtual Metrology Lab & Profile Projector Simulator

ptmit-org.github.io/virtuallab

Interactive Engineering Simulation

- Developed an interactive web-based virtualization of metrology instruments, including optical profile projectors and vernier calipers.

CTSKII Cloud Computing Platform Lab

ct.mitinidia.edu/ctskii

Department of Computer Technology, MIT Campus

- Architected and deployed an on-premise compute cluster platform for the department laboratory to streamline student computing resources.
